Black Hole pipeseam

In the 2003 Game Boy Advance turn-based strategy game Advance Wars 2, Black Hole uses pipelines to instantly supply their factories with the power and materials they stole from other countries. This allows them to each turn deploy three new units instead of just one! Because the pipelines themselves are made from an indestructible material, the only way to stop more supplies from pouring in is to destroy their only weakpoints, the seams.

p. 1/1

Although you can use any tools you like of course, this is a simple model so all you really need is a knife, glue and a good cutting surface.
